

#### LifeAlarm Fire Alarm Controls

UL, ULC, CSFM Listed; MEA (NYC) Acceptance\* 4009 IDNet NAC Extender for Control with IDNet Communications or Conventional NACs

#### **Features**

# Provides additional notification appliance circuit (NAC) capacity with flexible operation modes and power-limited design Four, Class B NACs are standard:

- Rated 2 A each for conventional reverse polarity 24 VDC notification appliances and providing multiple operation modes.
- Can be selected to provide synchronization for Simplex visible notification strobe flashes.
- Capable of controlling TrueAlert non-addressable notification appliances operating with SmartSync two-wire control mode.

#### Input control options:

- IDNet addressable communications from a 4007ES, 4010, 4010ES, 4100U, or 4100ES Fire Alarm Control Panel. See note.
- Or from one or two conventional 24 VDC NACs with multiple output control options

#### **IDNet communications control benefits:**

- Provides status monitoring and individual NAC control using a single address per 4009 IDNet NAC Extender
- · Supports IDNet "Device Level" earth fault location

#### WALKTEST operation is available with either input choice Internal 8 A power supply/battery charger:

- Charges internal batteries up to 12.7 Ah or up to 18 Ah batteries in external cabinet
- Provides status monitoring of battery, input power, and earth faults
- Rated 8 A for "Special Application" appliances; including 4901, 4903, 4904, and 4906 Series horns, strobes, horn/strobes, and speaker/ strobes
- Rated 6 A for "Regulated 24 DC" appliance power

#### **Optional 4009 IDNet NAC Extender modules:**

- · IDNet Communications Repeater provides Class B or Class A output
- IDNet Communications Fiber Optic Receiver/Repeater, available as Class B or Class X
- Four additional Class B NACs, rated 1.5 A for Special Application appliances; 1 A for Regulated 24 DC appliance power
- · Class A, Two Circuit Adapter Module

#### **UL Listed to Standard 864**

# External Accessories

#### IDNet communication fiber optic transmitters:

- For applications requiring the data integrity available with fiber optic communications
- · Available as Class B or Class X
- Mounts in standard six-gang electrical box

#### **External battery cabinet for 18 Ah batteries**

#### Introduction

**ADA compliance.** Complying with the notification requirements of ADA (Americans with Disabilities Act) may require more notification appliance power than is available within the fire alarm control panel. When additional power is required, a 4009 IDNet NAC Extender can provide up to 8 A of NAC power with up to eight, supervised reverse polarity NACs.

**Location flexibility.** The 4009 IDNet NAC Extender can be mounted close to a compatible dedicated host panel or can be located remotely for convenient power distribution. Multiple operation modes and multiple connection options further increase location flexibility.

**Additional information.** For additional operation detail and application information, refer to *Installation Instructions 574-181* and *field wiring diagram 842-068*.

**Note:** 4100U requires revision 11 software or higher for compatibility. 4010 requires revision 2 software or higher for compatibility.

Figure 1: 4009 IDNet NAC Extender connection reference drawing

ULC listed model is 4009-9202CA. This product has been approved by the California State Fire Marshal (CSFM) pursuant to Section 13144.1 of the California Health and Safety Code. See CSFM Listing 7300-0026:214 for allowable values and/or conditions concerning material presented in this document. Accepted for use – City of New York Department of Buildings – MEA35-93E. Additional listings may be applicable; contact your local Simplex product supplier for the latest status. Listings and approvals under Simplex Time Recorder Co. are the property of Tyco Fire Protection Products.

#### Application and operation information

**IDNet addressable communications compatible.** Up to 10, 4009 IDNet NAC Extenders can be controlled for each 4007ES, 4010ES, 4100U, or 4100ES IDNet communications channel; up to 5 can be controlled on the 4010 IDNet communications channel. Each output NAC can be individually controlled for general alarm or selective area notification requiring only one point address for each Extender. Individual Extender NACs can also be manually controlled from the host panel. IDNet controlled extenders will inform the host panel of troubles using IDNet communications. 4007ES, 4010ES, 4100ES, and 4100U control panels control using multi-point rules, refer to data sheet. *\$4090-0011* for details.

**Optional IDNet repeaters.** IDNet communications can be repeated with the optional IDNet Repeater Module or with the optional Fiber Optic Receiver Module. Up to 100 of the IDNet channel points can be repeated once (refer to Typical IDNet connection example and 4009 IDNet NAC Extender specifications for details). Repeated IDNet communications also support the "device level" earth fault location utility of the host panel.

**Hardwire control applications.** For applications where an existing (or new) conventional NAC needs additional power, the 4009 IDNet NAC Extender can be controlled directly from the NAC. Either one or two NACs, from either the same, or from different host fire alarm control panels, can be connected to control the 4009 IDNet NAC Extender output NACs. Multiple control selections provide flexible operation. (See Hardwire Control Connection Information for more detail.) Alarms from the host panel will activate the four, 4009 IDNet NAC Extender NACs (or optionally, 8 NACs) to extend the alarm.

The 4009 IDNet Extender monitors itself and each of its output NACs for trouble conditions, including earth faults. Extenders wired to conventional NACs will indicate a trouble by opening the path to the NAC's end-of-line resistor, but retaining the ability to respond to alarms. Individual troubles are also annunciated by LEDs located on the 4009 IDNet NAC Extender main circuit board. Refer to Service diagnostic features for more diagnostic information.

#### Product selection

#### Table 1: Standard models

Model	Description	
4009-9201**	120 VAC input	4009 IDNet NAC Extender with 4, Class B NACs
4009-9301	240 VAC input	and 8 A power supply
4009-9202CA (ULC listed model)	120 VAC input	-
** 4009-9201 has been seismic tested and is certified to IBC and CBC standards as well as to ASCE 7 categories A through F, requires battery brackets		
as detailed on data sheet \$2081-0019		

#### Table 2: Optional modules (for on-site installation)

Model	Description		Comments
4009-9807		C module, rated 1.5 A Special Application lated 24 DC appliance power, Class B	1 maximum
4009-9808	Dual Class A adapter (fo		Select as required (4 maximum)
4009-9809	IDNet Repeater, output	s Class A or Class B	Select <b>either</b> an IDNet Repeater <b>or</b> a Fiber Optic
4009-9810	Fiber Optic Receiver	Class B	Receiver as required; one transmitter can connect
4009-9811	Fiber Optic Receiver	Class A (IDNet), Class X (fiber)	to one receiver
4009-9805	Red Appliqué for door		Select if required
2975-9801	Semi-Flush Trim Kit	Beige trim	1 7/16 in. wide (78 mm), use if required for semi-
2975-9802	Sellii-FluSii IIIIII Nil	Red trim	flush installations

#### Table 3: Battery selection (select battery size using system requirements)

Model	Description	Comments
2081-9272	6.2 Ah Battery, 12 VDC	
2081-9274	10 Ah Battery, 12 VDC	Two batteries are required, 24 VDC operation
2081-9288	12.7 Ah Battery, 12 VDC	
2081-9275	118 An Batton/ 17 VIII	Requires external battery cabinet, two batteries are required, 24 VDC operation

#### Table 4: External accessories (select using system requirements)

Model	Description		Comments
4090-9105 4090-9107	IDNet Fiber Optic Transmitter	Class B operation  Class X operation	Mounts in six-gang electrical box, refer to 4090-9105/9107 IDNet fiber optic transmitter mounting information for mounting details  Note: Class B Fiber Transmitter Rev C or higher, IS NOT COMPATIBLE with Class B Fiber Receiver before Rev J.
4009-9801	External battery cabine	t for up to 18 Ah batteries, beige	16-1/4 in. W x 13-1/2 in. H x 5-3/4 in. D (413 mm x 343 mm x 146 mm)
4081 series	End-of-Line resistor harnesses; see data sheet \$4081-0003 for details		

Page 2 S4009-0002 Rev. 15 9/2019

# **Simplex**

#### Typical IDNet connection example

IDNet devices and additional 4009 IDNet NAC Extender(s)

Figure 2: Typical IDNet connection example

**Note:** Up to 10 4009 IDNet NAC Extenders may be connected using 4007ES, 4010ES, 4100U, or 4100ES IDNet channel, up to 5 on the 4010 IDNet channel. IDNet communications can be repeated only once (can pass through only one series connected repeater or one fiber optic receiver).

Page 3 S4009-0002 Rev. 15 9/2019

#### Typical fiber optic system connections

Figure 3: Typical fiber optic system connections

**Note:** Up to 10 4009 IDNet NAC Extenders may be connected per 4007ES, 4100ES, or 4010ES. Up to 5 4009 IDNet NAC Extenders may be connected on the 4010 IDNet channel. IDNet communications can be repeated only once (can pass through only one series connected repeater or one fiber optic receiver). Fiber optic transmitters connect to only one receiver in a 4009 IDNet NAC Extender.

#### Hardwire Control Connection Information

**NAC Input Selections.** The 4009 IDNet NAC Extender can be selected to:

- Track input NAC operation or to provide a locally generated code, selectable using NAC input.
- If selected for local coding, NAC outputs can be either **Temporal Coded** or **60 Beats/min March Time Coded**, one code selection per extender (input NACs must be on continuous with Alarm).
- Additionally, NAC outputs can be selected to provide the Simplex strobe synchronization signal. This signal will synchronize the flashes of synchronized strobes but will be ignored by free-run strobes and audible devices. (Strobes are for operation by noncoded NACs.)

**NAC input to NAC output control** can be selected for standard and optional NACs per the following table:

## Table 5: Conventional NAC Output Operation Options

Input	A	В	С
NAC 1	NACs 1 and 2, 5 and 6	NACs 1 - 4	NACs 1 - 8
NAC 2	NACs 3 and 4, 7 and 8	NACs 5 - 8	-

Table 6: SmartSync NAC Output Operation

Input	NAC Control Function	
NAC 1	Strobe Control	All NAC outputs (1 - 8)
NAC 2	Horn Control	All TVAC outputs (1 - 0)

Page 4 S4009-0002 Rev. 15 9/2019

#### SmartSync Notification Appliance Control

**The TrueAlert Notification Appliance** product line includes addressable and non-addressable operation. Non-addressable models are available with 2-wire SmartSync operation or conventional 4-wire operation. The following details apply to use with the 4009 IDNet NAC Extender:

- TrueAlert non-addressable models with SmartSync operation allow audible notification to be separately controlled over the same wire pair that controls visible notification.
- · 4009 IDNet NAC Extenders can be selected to provide SmartSync operation whether controlled by IDNet communications or conventional NACs.
- IDNet control allows output NACs to be **individually selected** for conventional **or** SmartSync operation.
- · With NAC input control, all output NACs are selected for either conventional or SmartSync operation.
- Refer to data sheet *\$4009-0003* for TrueAlert Addressable operation details, contact your local Simplex product supplier for further information on specific TrueAlert notification appliances.

#### Hardwire control NAC connection cne-line reference diagram

Figure 4: Hardwire control NAC connection one-line reference diagram

#### Note:

- 1. For separate audible and visible output NAC control, or SmartSync NAC output operation, 2 input NACs are required. NAC 1 is "on-until-reset" and NAC 2 is "on-until-silenced".
- 2. To synchronize strobe flash outputs for up to 4 4009 IDNet NAC Extenders, use the synchronized strobe output from a Synchronized Flash Module (4905-9914 for Class B operation, 4905-9922 for Class A operation) or, if available, from a NAC selected to provide synchronized strobe flash output. **NOTE: DO NOT USE a NAC selected for SmartSync operation for this function.**

Refer to Installation Instructions 574-181 for additional information and application guidance.

Page 5 S4009-0002 Rev. 15 9/2019

# 4009 IDNet NAC Extender specifications

#### Table 7: Input ratings

Specification	Rating
120 VAC input (4009-9201)	3A @ 102 VAC -132 VAC, 60 Hz
240 VAC input (4009-9301)	1.5A @ 204 VAC -264 VAC, 50 Hz /60 Hz
Hardwire control from external NACs, input requirements	Conventional reverse polarity operation
mardwire control from external NACs, input requirements	5 mA maximum; 16 VDC to 33 VDC

### Table 8: Output ratings

Specification	Rating
Total rating	8 A, Special application appliances 6 A, regulated 24 DC appliance power
Standard NACs	2 A each, special application or regulated 24 DC appliance power
Optional NACs (requires 4009-9807)	1.5 A each, Special Application appliances 1 A each, Regulated 24 DC appliance power
Special application appliances	Simplex non-addressable horns, strobes, and combination horn/strobes and speaker/strobes (contact your Simplex product representative for compatible appliances)
Regulated 24 DC appliances	Power for other UL listed appliances; use associated external synchronization modules where required
Strobe operation	Up to 33 strobes for each NAC can be synchronized; output NACs configured for Simplex synchronized strobe operation are synchronized to each other
Auxiliary output	500 mA @ 24 VDC nominal

#### **Table 9: Optional modules ratings**

Specification		Rating
	Input power	70 mA @ 24 VDC, system supplied
	IDNet input, one address	Maximum distance from IDNet source is 2,500 ft (762 m)
<b>IDNet Repeater</b>		Repeated IDNet output for up to 100 devices (total IDNet devices not to exceed 250 for
Module		each channel)
( 4009-9809 )	IDNet output specifications	Maximum distance to farthest device is 2,500 ft (762 m)
		Total distance including "T-taps" is 10,000 ft (3048 m)
		Class A loop maximum distance is 2,500 ft (762 m), no "T" taps

#### Table 10: Fiber optic receiver modules

Specification	Rating
Input current	4009-9810 , Class B, 65 mA @ 24 VDC, system supplied
	4009-9811 , Class X, 80 mA @ 24 VDC, system supplied
IDNet output specifications	Same as those for repeater module
Fiber optic transmission distance	3000 ft (914 m) maximum

#### **Table 11: General specifications**

Specification	Rating
Operating temperature	32° F to 120° F (0° C to 49° C)
Operating humidity range	10% to 90% RH from 32° F to 104° F (0° C to 40° C)
Wiring Connections*	
	Terminal blocks for 18 AWG (stranded) to 12 AWG (solid)
<b>Note:</b> * Metric wire equivalents: 18 AWG = 0.82 mm <sup>2</sup> ; 12 AWG = 3.31 mm <sup>2</sup>	

Page 6 S4009-0002 Rev. 15 9/2019

# Fiber optic transmitter specifications

#### Table 12: Fiber optic transmitter specifications

Specification	Rating	
Input voltage	18.9 VDC -32 VDC from compatible listed fire alarm supply	
Input current	4090-9105, Class B, 30 mA @ 24 VDC	
input current	4090-9107 , Class X, 35 mA @ 24 VDC	
	Multimode, graded index, 50/125μm, 62.5/125 μm, 100/40 μm, or 200 μm	
Fiber optic connections and cable requirements	Type ST connectors	
Their optic connections and cable requirements	4090-9105, Class B operation, two fiber cables required	
	4090-9107 , Class X operation, four fiber cables required	
Module size (with mounting bracket)	6-13/16 in. W x 3-3/4 in. H x 1-1/8 in. D (173 mm x 95 mm x 29 mm)	
	Green LED flashing = transmit	
On-board status indicators	Red LED flashing = receive	
	Separate red LED on 4090-9107 = Class X receive	
Communications	Simplex IDNet	
Fiber optic transmission distance	3000 ft (914 m) maximum	
Wiring connections*	Terminal blocks for 18 AWG (stranded) to 12 AWG (solid)	
Operating humidity	10% to 90% RH from 32° F to 104° F (0° C to 40° C)	
Operating temperature	32° F to 120° F (0° C to 49° C)	
* Metric wire equivalents: 18 AWG = 0.82 mm²; 12 AWG = 3.31 mm²

#### 4009 IDNet NAC Extender mounting and module placement information

Additional four point module shown model 4009-9807.

Figure 5: 4009 IDNet NAC Extender mounting and module placement information

**Note:** Recommended conduit entrance varies with module selection. Refer to general installation instructions *574-181*, specific module installation instructions, and to field wiring diagrams 842-068 before locating conduit entrance.

#### 4009 IDNet NAC extender cabinet with door detail

Figure 6: 4009 IDNet NAC extender cabinet with door detail

Page 8 S4009-0002 Rev. 15 9/2019

#### 4090-9105/9107 IDNet fiber optic transmitter mounting information

#### Service diagnostic features

**Power-up self-diagnostics.** Upon power-up, the 4009 IDNet NAC Extender tests each module and performs earth fault diagnostics. Trouble conditions are communicated to the host control panel and are also displayed on diagnostic status LEDs in the 4009 IDNet NAC Extender. When connected via IDNet communications, detailed status information is available at the host. When controlled with conventional NAC inputs, common troubles are signaled by providing a polarized open circuit that disconnects the NAC wiring from its end-of-line resistor but still allows a reversed polarity alarm to be received.

**Door mounted reference label.** The 4009 IDNet NAC Extender has a detailed programming and diagnostic label inside the front door that provides a quick reference for both installation and checkout.

**LED Status Indicators** are provided for the following:

- Each NAC (standard and optional) has a dedicated yellow LED that:
  - During supervision provides a slow flash to indicate a short circuit condition and a fast flash to indicate an open circuit.
  - During an alarm, the LED follows the NAC output (on steady or flashing with coded output).
- Four, general status yellow LEDs provide nine separate indications listed in priority of urgency. As a trouble is eliminated, any remaining trouble will then be indicated until the 4009 IDNet NAC Extender is returned to normal operation.
- **AC power status** is indicated by a green LED that is on when AC is normal. During low AC (brownout) conditions or with no AC, the LED is off. Additional power and battery status is indicated by the general status LEDs.

Page 9 S4009-0002 Rev. 15 9/2019

#### 4009 IDNet NAC extender current calculation chart

#### Step 1. Calculate the basic extender battery requirements (minus NAC loads)

Panel, NAC Options, and Auxiliary Power (underlined model numbers are optional modules).

Model	Description	Description		Actual supervisory	Alarm current	Actual alarm
4009-9201	120 VAC input	Basic Panel	85 mA	85 mA	185 mA	185 mA
4009-9301	240 VAC input	-Dasic Farier	OSTIA	OJIIIA	103 IIIA	103 IIIA
4009-9807	Additional four point	Additional four point NAC		+	40 mA	+
4009-9808	Dual class A adapter	Dual class A adapter (no additional current)		_	_	_
Auxiliary power output			(500 mA maximum)	+	(500 mA maximum)	+ [A1]
Basic panel sup	ervisory current			= [S1]		
Basic panel alarm current						= [A2]

#### Step 2. Calculate IDNet output module and device current (if used)

4009-9809	IDNet Repeater		Calastanafar	70 mA		70 mA	
4009-9810 *	Fiber Optic Receiver, Class B		Select one for each extender	65 mA	+	65 mA	+
4009-9811 *	Fiber Optic Receiver, Class	s X		80 mA		80 mA	
IDNet devices (connected to repeater or receiver above), 0.7 mA each,				Total devices x 0.	.7 _	Total devices x 0.7	_
maximum of 100			mA each	Τ	mA each	T	
Note: IDNet Fiber Optic Transmitter current   IDNet module supervisory cui				urrent	[S2] =		
is supplied from the host fire alarm control							
panel		IDNet mo	dule alarm curren	t			= [A3]
					Maximum available	current	= 8 A*
Step 2. Calculate available NAC current					Subtract auxiliary power output		- [A1]
					Subtract IDNet mo	dule current	- [A3]
* 8 A for special application appliances; 6 A for regulated 24 DC appliances				Available NAC current		= [A4]	

#### **Step 3. Calculate actual NAC loading** (Limited to available NAC current per Step 2.)

NAC type	NAC circuit #	NAC alarm current
	Circuit 1	+
Standard panel NACS, 2 A maximum for each NAC	Circuit 2	+
Standard paner NACS, 2 A maximum for each NAC	Circuit 3	+
	Circuit 4	+
	Circuit 5	+
Optional four point NAC module, 1.5 A maximum special application rating, 1 A maximum	Circuit 6	+
regulated 24 DC rating, per NAC	Circuit 7	+
	Circuit 8	+
Total actual NAC load alarm current		= [A5]

#### Step 4. Calculate total supervisory current

Total supervisory current = Basic panel current [S1] + IDNet Module current [S2] =	
Step 5. Calculate total alarm current	
Total alarm current = Basic panel current [A2] + IDNet module current [A3] + actual NAC Current [A5] =
